

THE AGENTIC SECURITY PLATFORM

SECURITY'S PROBLEM WAS NEVER DETECTION. IT'S THE HANDOFF.

Your scanners find the exposure. Security does not own the fix. It lives in the IT Ops and DevOps tools where the work happens. For two decades the bridge from finding to fixing has been a ticket and a hope. Backlogs grow. *Risk persists.* Audits find the gap.

EVERYONE FINDS AND PRIORITIZES. ALMOST NO ONE SHIPS THE FIX.

EVERYONE DOES THIS

WHERE MONDOO WINS

01 • DETECT

FIND IT

Agentless, full surface

02 • PRIORITIZE

RANK IT

Beyond CVSS

03 • SHIP

FIX IT

Agentic AI, as code

04 • VERIFY

CLOSE IT

Confirmed close

Others stop at guidance, tickets,
patches or SOAR playbooks.

Agentic AI writes the fix and ships
it, then proves it closed

FINDINGS WITHOUT FIXES ARE JUST REPORTS. MONDOO SHIPS THE FIX.

WHY THIS IS A CATEGORY NOW

CAPABILITY

AI CAN FINALLY FIX

Agentic AI now plans and ships remediation safely, with humans in the loop. For twenty years AI could only find. Now it fixes.

DEMAND

DONE WITH TICKET-AND-HOPE

Buyers are tired of layering detection on detection. The mandate moved from what is broken to how we close the loop.

REGULATION

CLOSURE IS REQUIRED

NIS2, DORA, and the EU AI Act now demand proof of remediation, not just discovery. Finding it is no longer enough.

NO BLACK BOX. OPEN SOURCE CORE.

Mondoo's engine is open source. cnspec and cnquery scan 60+ platforms as policy-as-code, and xgrep is the first Semgrep-compatible SAST built for AI agents. Every policy, check, and fix is **inspectable, auditable, and reversible**. The platforms you are comparing are closed boxes.

CNSPEC

CNQUERY

XGREP • AI-NATIVE SAST

ADJUSTABLE • REVERSIBLE

WHAT NO OTHER PLATFORM DOES

WE SHIP THE FIX. THEY SHIP A TICKET.

Every exposure tool now claims remediation. Most of it is a ticket, a patch, or a SOAR playbook. Mondoo's agentic AI writes the actual fix as code and ships it, then confirms it closed.

SHIP OVER SIGNAL • AGENTIC,
NOT ORCHESTRATION

FLUENT WHERE THE FIX HAPPENS.

Rivals are security tools that toss work over the wall. Mondoo ships into **DevOps** (GitHub, Terraform) and **IT Ops** (Intune, Jamf, Ansible), so nobody learns a new tool.

SECURITY • DEVOPS • IT OPS • ONE PLATFORM

KEEP YOUR STACK. ADD THE FIX.

Already running scanners and EDR? **Keep them**. Mondoo is agentless by default, federates their signals alongside its own native scanning, and ships the fixes they only flag.

AGENTLESS • FEDERATE EXISTING TOOLS •
PRIMARY OR ADDITIVE

RISK YOU CAN DEFEND.

Prioritization goes **beyond CVSS**. Business impact, blast radius, active exploits, and threat intelligence combine into one score you can defend to an auditor or the board.

BEYOND CVSS • EXPLAINABLE • BOARD-READY

SECURING AI, WITH AI.

SHADOW AI

AI POSTURE

AI SUPPLY CHAIN

ROGUE AGENTS

AI is everywhere in your business now: the AI your workforce uses, the AI your engineers build, the AI your products deploy. Mondoo finds shadow AI across every team, governs it to your policy, and ships fixes for AI system exposure using the same engine that secures everything else. Our free AI Skill Check has already scanned **53,000+ agent skills**. The platforms you are comparing do not secure AI at all.

SHIP FIXES THROUGH

Intune · Jamf · Ansible · GitHub
Terraform · ServiceNow

NO RIP-AND-REPLACE

Earned autonomy, not assumed.

The AI does the work. You keep the authority. It proposes, you approve, and you dial up automation as evidence accumulates. Every action is previewed, logged, and reversible.

RUN IT YOURSELF, OR LET MONDOO RUN IT FOR YOU. SAME PLATFORM. SAME OUTCOMES.

Closure evidence for NIS2, DORA, ISO27001, SOC2 and PCI DSS.
